Release Notes SHIP_1.1.2

The bug-fix release SHIP_1.1.2 mainly focuses on connector message handling. The bug-fix release is mandatory.

Following changes are part of the bug-fix release:

1.1.1. Connector

- SHIP3-229: Redesign of message queue processing in order to prevent message losses and deadlocks during message processing.
- SHIP2-213: Fonts packages used in the connector Admin-UI are now directly bundled within the application package and will not be loaded from external resources anymore in order to make outbound firewall rules not necessary anymore.
- SHIP3-216: Improved feedback messages in case of configuration failures in the local participant configuration of the connector Admin-UI.
- SHIP3-265: Connector Admin-UI shows version of currently running connector.
- SHIP3-267: The manifest files now contain consistent implementation-version and build-time information in the MANIFEST.MF files in the application jar files.
- SHIP3-280: The connector message validation procedure checks for availability of the sender endpoints before specific validations and therefore is able to indicate configuration errors explicitly.
- SHIP3-291: Bugfix in swagger documentation regarding the use of generic attribute lists in Sender API (insurance, person and persons endpoints).
- SHIP3-293: Bugfix in swagger documentation regarding pageable return structures in Sender API (protocol, actors, valuesets, participants endpoints).
- SHIP3-268: Additional version endpoint to query the currently installed version on every API.

1.1.2. RAC

No new RAC version available.

1.1.3. Business Rules

No changes in Business Rules.

1.1.4. UI Config

No changes in UI Config.

1.1.5. Application regulations

No Changes in Application regulations.

1.1.6. Documents

- SHIP3-239: Difference between schema definition and documentation (Meldespezifikation) regarding attribute of 'CHOPDataList' in message M_01_02_050 corrected.

1.1.7. Currently valid versions

The following overview shows the currently used versions.

Components	Released Version	Compatible Versions	Storage Location
SHIP Services			

• SHIP Connector	1.1.12	1.1.10.1 (SHIP_1.0.4 / 19/02.04) 1.1.11 (SHIP_1.1.0 / 19/03)	SHIP-standard
• SHIP Connector Database	same mySQL		part of SHIP Connector
• SHIP RAC	1.1.11		SHIP-standard
• SHIP RAC Database	same existdb		part of SHIP RAC
• LDAP / AD Interface			part of SHIP RAC
• Central Services	1.1.1	1.1.1	part of SHIP Infrastructure
• Business Rules pro Messagetype	1.2.2	1.2.1 1.2.2	part of SHIP Connector (from Central Service)
• Referencedata ValueSet	1.0	1.0	part of SHIP Connector (from Central Service)
• UI Configuration per Messagetype	1.2.2	1.2.1 1.2.2	part of SHIP RAC (from Central Service)
• API Interface Admin API	1.0		part of SHIP Connector
• API Interface Sender API	1.0		part of SHIP Connector
• API Interface Central Service API	1.0		part of SHIP Connector
• API Interface Receiver API	1.0		part of SHIP Connector
Documentation			
• eCH-0234 – SHIP Data standard benefit cases Administration Healthcare	1.0		eCH
• eCH-0235 – SHIP Message standard	1.0		eCH
• eCH-0236 – SHIP Process standard "Hospital stationary"	1.0		eCH
• eCH-0237 – SHIP Process standard «Care»	1.0		eCH
• Data-privacy concept	1.0		SHIP-services
• IT Security-Concept	1.7		only on demand
• application provisions	3.0.0		SHIP-standard
• Message specification	1.0.0.3		SHIP-standard
• RAC User Guide	1.1.1		SHIP-services
Third-Party-Produkte			
mySQL - Windows	5.7.19		part of SHIP Connector
mySQL - Linux	5.7		part of SHIP Connector
eXistDB	5.1.1		part of SHIP RAC
Java - Windows	8		
OpenJDK - Linux	8		

the Colored Objects are available in a new Version.
